NCE Project No. 55.159.55

The preparation of this report has been financed in part by grants from the Federal Highway Administration, U.S. Department of Transportation.

The contents of this report do not necessarily reflect the official views or policy of the U.S. Department of Transportation.

Executive Summary

In 2022, Nichols Consulting Engineers, Chtd. (NCE) was selected by the Metropolitan Transportation Commission (MTC) to update the City of Novato's (City) pavement management program (PMP) as part of the Pavement Management Technical Assistance Program, Round 23 (P-TAP 23). This report summarizes the results of the 2023 update and its purpose to help educate policy makers about the current condition of the street network and the impact of various funding scenarios on the future network condition.

The City of Novato is responsible for maintaining approximately 152.3 centerline miles of pavement which represents a substantial investment of approximately \$277 million. In 2022 NCE collected pavement condition data throughout the network using Metropolitan Transportation Commission (MTC) modified ASTM survey procedures. Survey data were entered into StreetSaver[®] database, which the City uses as a decision-support tool.

Overall, the City's pavement network is currently in "Fair" condition with an average pavement condition index (PCI) of 66. Approximately 38.2 percent of the street network is in "Good" condition while more than one-tenth of the network is in "Poor" and "Failed" conditions.

The budget needs analysis indicated that the City needs to spend \$56.5 million over the next five years to bring the street network to a condition that can be maintained with on-going preventive maintenance in the most cost-effective way.

Five alternative budget scenarios were performed to illustrate the impacts of different funding levels. The following table lists each scenario with its corresponding five-year budget, and the PCI and deferred maintenance at the end of the analysis period.

Scenario	Description	5-Year Budget (\$M)	2027 PCI	2027 Deferred Maintenance (\$M)
1	Do Nothing	0.0	56	101.8
2	Existing Budget	18.1	61	61.0
3	Maintain PCI at 66	35.7	66	42.1
4	Increase PCI to 72	55.0	72	20.1
5	Best Management Practice	70.0	76	3.4

NCE recommends that the City pursue Scenario 4, which will increase the network PCI to 72 in five years. This scenario will also increase the portion of the network in "Good" condition and decrease the deferred maintenance. It will require \$55 million over the next five years.

Quality Management Report

1 Introduction and Background

In 2022, Nichols Consulting Engineers, Chtd. (NCE) was selected by the Metropolitan Transportation Commission (MTC) to update the City of Novato's (City) pavement management program (PMP) as part of the Pavement Management Technical Assistance Program, Round 23 (P-TAP 23). In general, PMPs are "designed to provide objective information and useful data for analysis so that... managers can make more consistent, cost effective, and defensible decisions related to the preservation of a pavement network."¹

To update City's PMP, NCE performed walking condition survey in 2022 prior to the major storms that took place at the end of 2022 and the beginning of 2023. The surveys employed the Metropolitan Transportation Commission's (MTC) modified² ASTM D6433³ survey procedures. The surveys did not include non-pavement issues such as traffic, safety and road hazards, geometric issues, shoulders, sidewalks, curb and gutters, drainage issues, or immediate maintenance needs.

After inspection, all survey data were entered into the City's StreetSaver[®] database, and pavement condition index (PCI) calculations were performed. NCE then met with agency representatives and reviewed and updated the City's decision tree including maintenance and rehabilitation (M&R) strategies and treatment unit costs. A budget needs analysis was then performed, and five budget scenarios were analyzed for the street network.

This report answers the following questions for the City of Novato:

- What does the City's pavement network include?
- What is the current condition of the pavement network?
- What are the City's current M&R strategies?
- How much funding is required to perform all needed M&R treatments over the next five years?
- What effect with the City's existing funding have on the network condition and overall deferred maintenance?
- What effect will other funding levels have on the network condition and deferred maintenance?

2 Network Summary

The City is responsible for maintaining approximately 152.3 centerline miles of streets (or 952 management sections). Table 1 summarizes the City's street network by functional classification. The network is predominantly composed of asphalt concrete (AC) pavement. Redwood Blvd from Lamont Ave to San Marin Dr is a composite pavement (AC over portland cement concrete).

Table 1. Network Summary Statistics

Functional Class	Number of Sections	Centerline Miles	Lane Miles	Network Area (%)
Arterial	65	20.1	54.2	19.4
Collector	85	23.0	46.4	17.1
Residential/Local	802	109.2	218.1	63.5
Total	952	152.3	318.7	100.0

The street network replacement cost is estimated to be approximately \$277 million. This can be viewed as the value of the pavement network and is the amount needed to fund a reconstruction of the entire paved network. It does not include related infrastructure assets such as sidewalks, signals, markings, signs, or storm drains.

3 Pavement Condition

Pavement condition is typically quantified using the pavement condition index (PCI), which ranges from 100 (best) to 0 (worst). Pavement condition is affected by the environment, traffic loads and volumes, construction materials, and age. Figure 1 shows examples of streets with varying PCIs.

The PCI scale is divided into four general condition categories. Pavements in “Good” condition have a PCI above 70, pavements in “Fair” condition have a PCI between 50 and 69, pavements in “Poor” condition have a PCI between 25 and 49, and finally pavements in “Failed” condition have a PCI below 25.

Figure 1. Examples of Streets with Different PCIs

A list of all sections in the network along with their attributes, including the PCI at the time of last inspection, is provided in Appendix A. For convenience, two versions are provided – one sorted alphabetically by street name and the other sorted by descending PCI.

The current average PCI for the City’s network is 66. This value is an area-weighted calculation performed in StreetSaver® and is based on the condition survey performed in 2022. Figure 2 illustrates the City’s historical network PCI over the last decade. The PCI values shown were obtained from field inspections performed in those years. The City’s network PCI has decreased in the last few years due to reduced maintenance work, which is also illustrated in Figure 2.

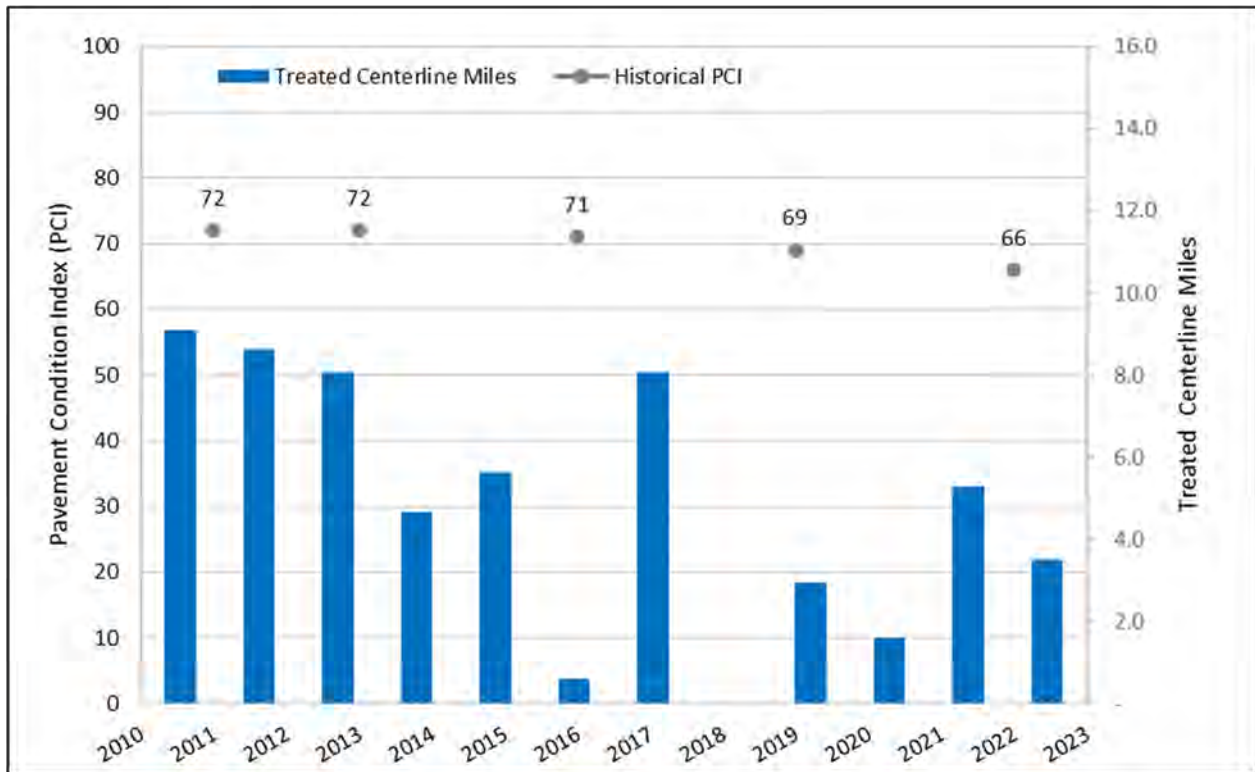

Figure 2. Historical Network PCI since 2011

Figure 3 breaks down the current network PCI by functional classification. The average pavement condition for arterials is the highest with PCIs of 73. The average condition for both collectors and residentials are similar with PCIs in the 60s.

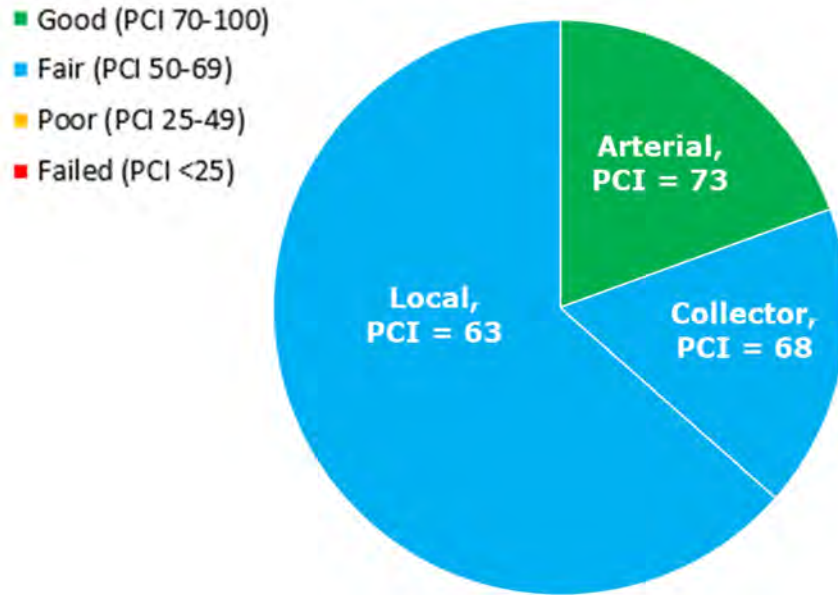

Figure 3. Network Condition Breakdown by Functional Classification

Table 2 summarizes the street network by condition category and functional classification. The majority of the street network is in “Good” and “Fair” conditions while only one-tenth of the network is in “Poor” and “Failed” conditions.

Table 2. Pavement Condition Breakdown by Functional Class

Condition Category	PCI Range	Arterials (%)	Collectors	Residentials (%)	Entire Network (%)
Good	70-100	11.9	7.4	18.9	38.2
Fair	50-69	6.9	8.5	34.3	49.7
Poor	25-49	0.6	1.0	9.1	10.7
Failed	<25	0.0	0.2	1.2	1.4
Total	-	19.4	17.1	63.5	100.0

Figure 4 shows the City's average network PCI compared to neighboring agencies as well as the statewide average PCI from the 2020 California Statewide Local Streets and Roads Needs Assessment⁴. As illustrated, the City's network PCI is among the midst of its neighboring agencies and is equal to the 2020 statewide average.

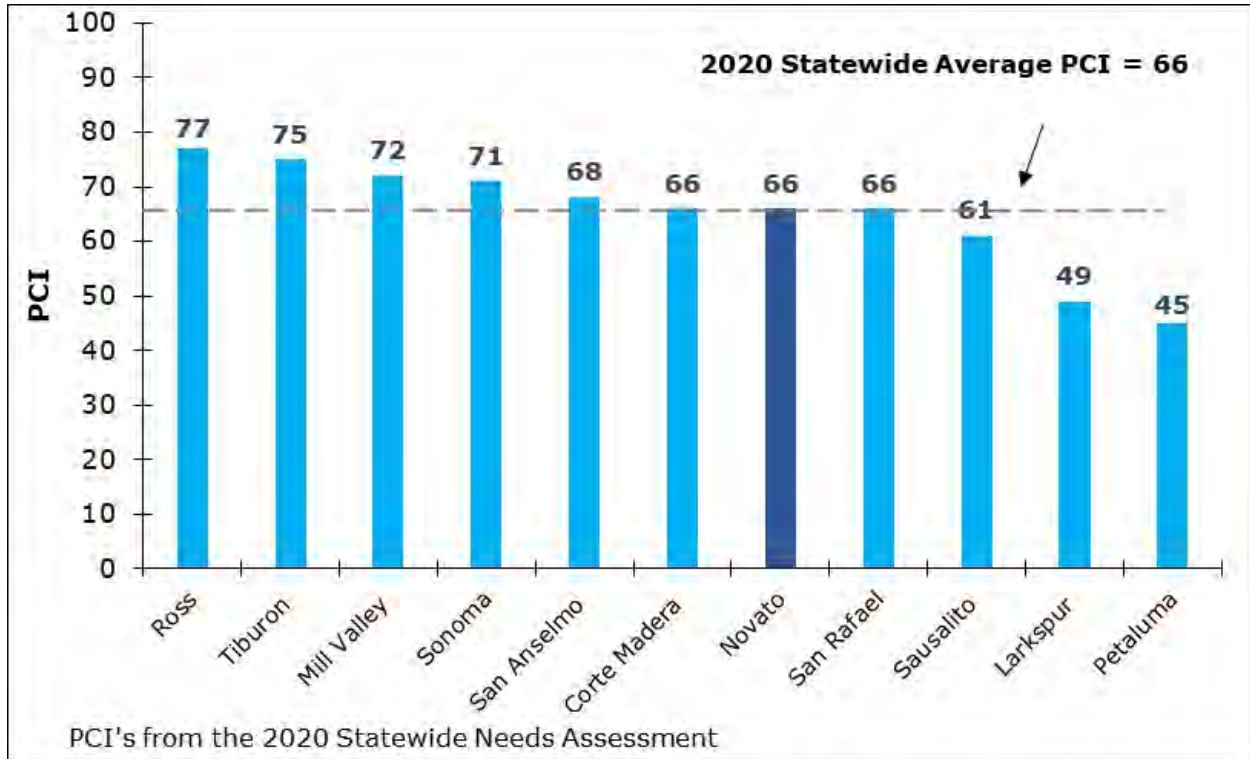

Figure 4. Comparison of City's Network PCI to Neighboring Agencies

⁴ "California Statewide Local Streets and Roads Needs Assessment 2020 Update". Nichols Consulting Engineers, Chtd., CA, 2020.

4 Maintenance and Rehabilitation Strategies

The City's current M&R strategies include cost-effective preventive treatments. In general, crack fill with microsurfacing will be applied to pavements in "Good" condition; pavements in "Fair" condition will receive a scrub seal with microsurfacing (with dig-outs as needed); pavements in "Poor" condition will receive a mill and HMA overlay with dig-outs; and full depth reclamation (FDR) will be performed when pavements are in "Failed" condition. The City's M&R strategies are formalized into a decision tree⁵ (presented in Appendix B), which is instrumental in performing the budget needs analysis and budget scenarios.

Experience and research have shown that it costs much less to maintain pavement in good condition than to repair pavement that has already failed. As shown in Figure 5, by allowing pavements to deteriorate, streets that once cost \$10.50/square yard (SY) to microsurface may soon cost \$49.00/SY to overlay, or \$75.00/SY to reclaim. In other words, delaying repairs can significantly increase M&R costs. Note that a microsurfacing can be placed on at least 7 times as many lane miles as those requiring FDR.

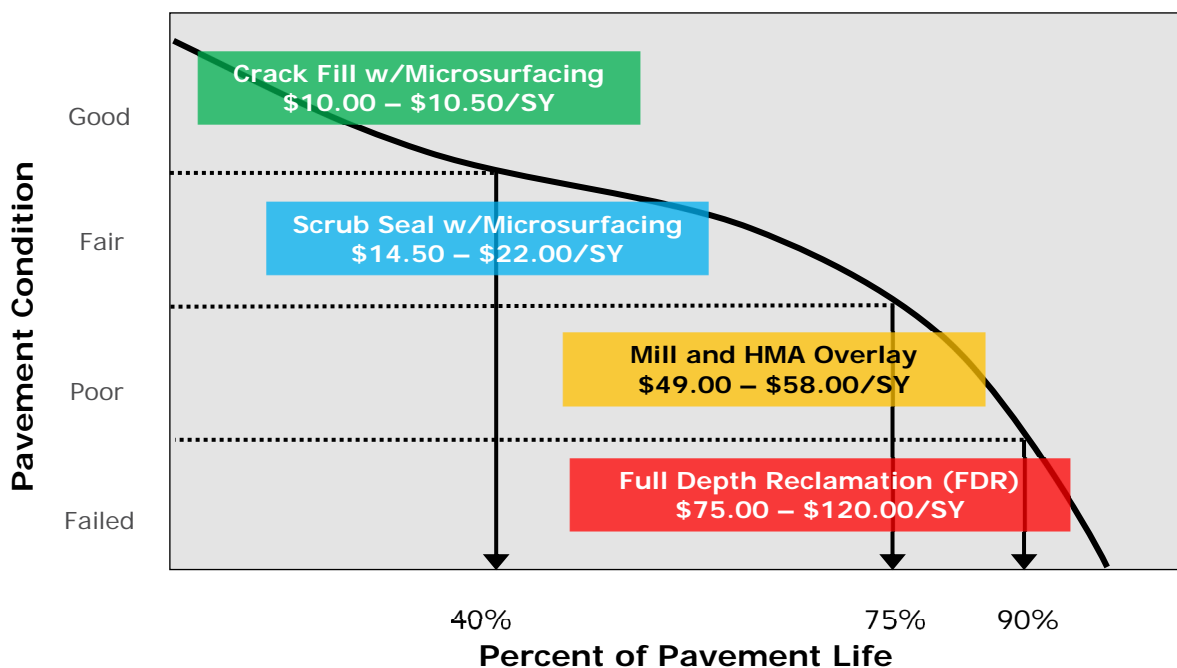

Figure 5. Costs of Maintaining Residential Pavements Over Time

⁵ Note: The StreetSaver® "Maintenance and Rehabilitation Decision Tree" divides the "Fair" condition category to separate pavements with primarily non-load-related distresses (e.g., longitudinal cracking) from those with load-related distresses (e.g., alligator cracking).

5 Budget Analyses

Based on the principle that it costs less to maintain streets in good condition than it does to repair those that have failed, cost-effective PMPs employ strategies that eliminate the deferred maintenance⁶ and then maintain the network with on-going preventive maintenance. Such strategies bring the network condition to an optimal PCI that can be maintained over time.

The first step in developing such a cost-effective strategy is to determine the total maintenance budget needs of the network. The next step is to conduct alternative budget scenario analyses. In consultation with the City, five funding scenarios were selected for analysis and performed using StreetSaver®:

- **Scenario 1: Do Nothing** – This scenario assumes the City will not perform any pavement M&R for the next five years.
- **Scenario 1: Existing Budget** – This scenario assumes the City will spend approximately \$3.65 million in 2023, \$5.4 million in 2024, and \$3 million per year for 2025 to 2027. This represents a total 5-year budget of \$18.1 million.
- **Scenario 2: Maintain PCI** – This scenario aims to maintain the existing network PCI of 66 over the next five years.
- **Scenario 3: Improve PCI** – This aims to improve the network PCI to 72 over the next five years.
- **Scenario 5: Best Management Practice (BMP)** – This scenario aims to achieve a maintainable network over the next five years by eliminating the deferred maintenance over the next five years.

The budget needs analysis and budget scenarios are presented in the following subsections. The detailed results of the budget needs analysis are provided in Appendix C. The detailed results of the budget scenarios are provided in Appendix D. Additionally, maps illustrating the current pavement condition and the projected 2027 pavement condition for each scenario are provided in Appendix E.

⁶ Deferred maintenance is M&R not performed due to insufficient funding.

5.1 BUDGET NEEDS ANALYSIS

The total budget needs for the network represents the cost associated with performing M&R treatments at the optimal time – optimal meaning the PCI is maximized and the cost is minimized – over the analysis period. This was done by performing a budget needs analysis in StreetSaver® with an inflation rate of five percent for an analysis period of five years. Note this inflation rate is two percent higher than used in the 2019 analysis and report, consequently, the long-term results are greater.

The results of the budget needs analysis are presented in Table 3. The total budget needs for the City for the next five years is estimated to be \$56.5 million. Of the total budget needs, approximately \$6.8 million (12.0 percent) is devoted to preventive maintenance, while the rest is allocated for rehabilitation and reconstruction treatments.

Table 3. Summary Results for Budget Needs Analysis

Year	2023	2024	2025	2026	2027	Total
Budget Needs (\$M)	47.1	3.8	3.2	1.3	1.1	56.5
Treated PCI	79	77	76	74	73	NA
Untreated PCI	65	63	61	59	56	NA

If the City follows this ideal strategy, the average network PCI will immediately increase as a large amount of deferred maintenance⁷ is addressed in the first year, and then decrease to the low-70s. This type of budget, which addresses all the deferred maintenance in the first year, is known as front-loaded. Alternatively, if no maintenance is performed over the next five years, the network PCI will drop to 56 by 2027.

⁷ Note: the budget needs for the first year of the analysis represents the City's current deferred maintenance value.

5.2 SCENARIO 1: DO NOTHING

This scenario assumes that City will not put any funding towards pavement M&R for the next five years. As shown in Table 4 and Figure 6, the network PCI will decrease to 56 and the deferred maintenance will increase to \$101.8 million by 2027. The portion of the network in “Good” condition will decrease to 20.1 percent and the portion of network in “Failed” condition will increase to 4.3 percent.

Table 4. Summary Results for Scenario 1

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	0.0	0.0	0.0	0.0	0.0	0.0
Deferred Maintenance (\$M)	47.1	58.9	72.4	87.2	101.8	NA
Treated PCI	65	63	61	59	56	NA

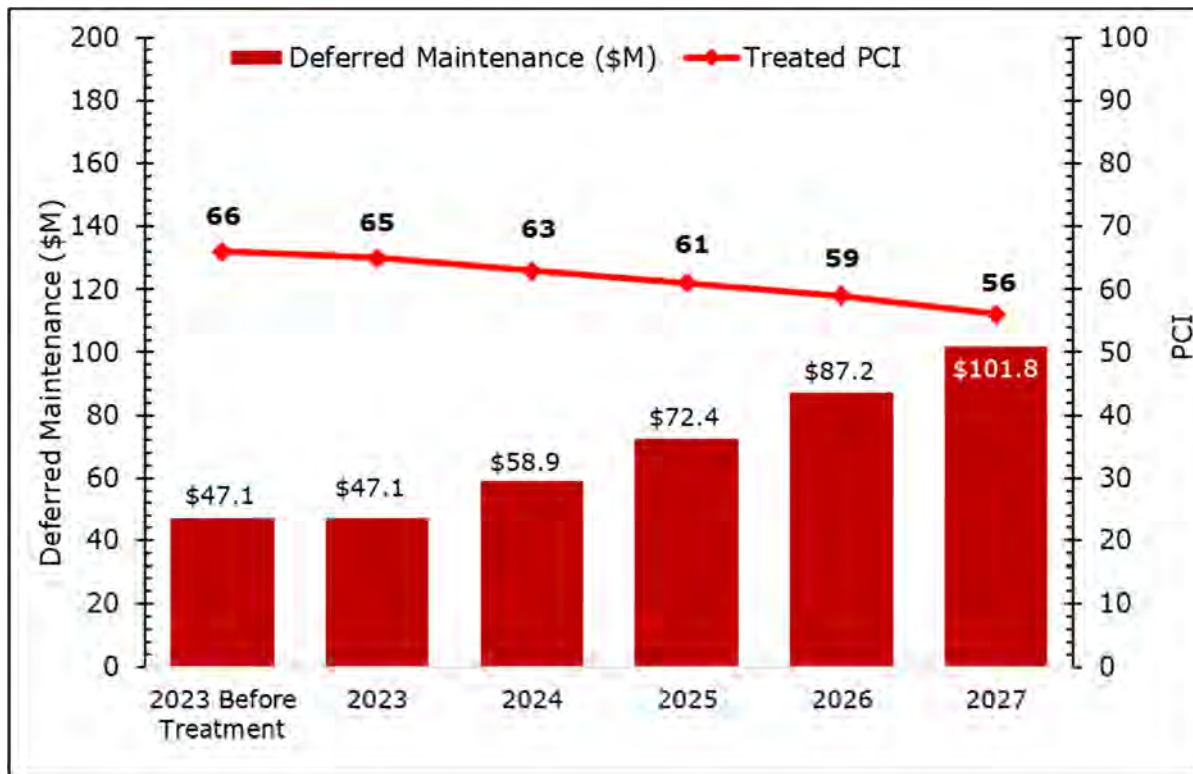

Figure 6. PCI vs Deferred Maintenance for Scenario 1

5.3 SCENARIO 2: EXISTING BUDGET (\$18.1M/5 YEARS)

This scenario assumes the City's existing funding will be approximately \$18.1 million for the next five years. For 2023, the funding includes \$2.65 million in planned CIP projects plus \$1 million for street maintenance such as crack seals, digouts, patching, and pothole repairs. For 2024 the funding includes \$2.5 million in planned CIP projects, plus \$1 million for street maintenance, plus an additional \$1.9 million for other paving projects to be optimized by StreetSaver. For 2025 to 2027, approximately half of the annual funds will go toward street maintenance while the other half will go towards other paving projects as optimized by StreetSaver. As shown in Table 5 and Figure 7, the network PCI will decrease to 61 and the deferred maintenance will increase to \$61.0 million. By 2027, approximately 33.5 percent of the network will be in "Good" condition with 4.2 percent in "Failed" condition. Appendix F provides a list of candidate sections selected for treatment.

Table 5. Summary Results for Scenario 2

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	3.7*	5.4*	3.0	3.0	3.0	18.1
Deferred Maintenance (\$M)	43.4	37.6	44.7	54.7	61.0	NA
Treated PCI	66	65	64	63	61	NA

*Includes scheduled CIP projects in 2023 and 2024

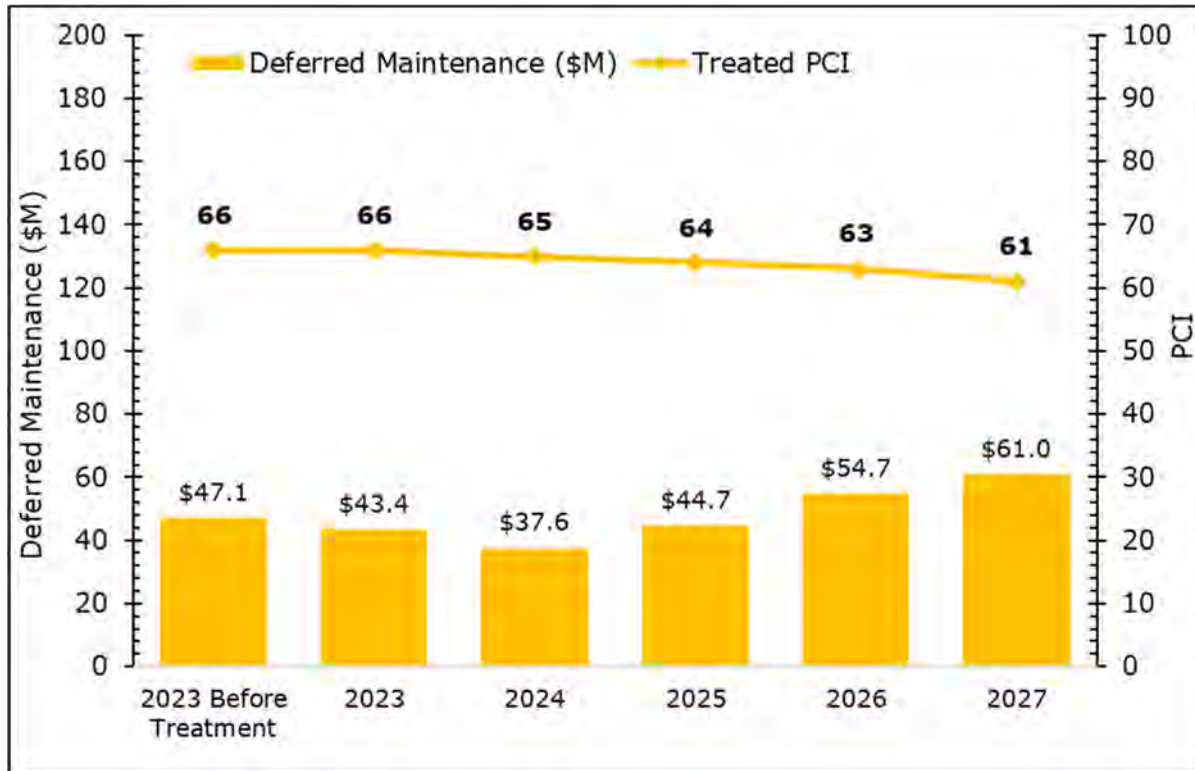

Figure 7. PCI vs Deferred Maintenance for Scenario 2

5.4 SCENARIO 3: MAINTAIN PCI AT 66 (\$35.7M/5 YEARS)

This scenario aims to maintain the network PCI at 66 over the analysis period. As shown in Table 6 and Figure 8, the financial commitment required to accomplish this goal is \$35.7 million over five years. This will result in 43.5 percent of the network being in “Good” condition with 4.2 percent in “Failed” condition. The deferred maintenance will decrease to \$42.1 million by 2027.

Table 6. Summary Results for Scenario 3

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	3.7*	8.0*	8.0	8.0	8.0	35.7
Deferred Maintenance (\$M)	43.4	35.0	36.9	41.5	42.1	NA
Treated PCI	66	66	66	66	66	NA

*Includes scheduled CIP projects in 2023 and 2024

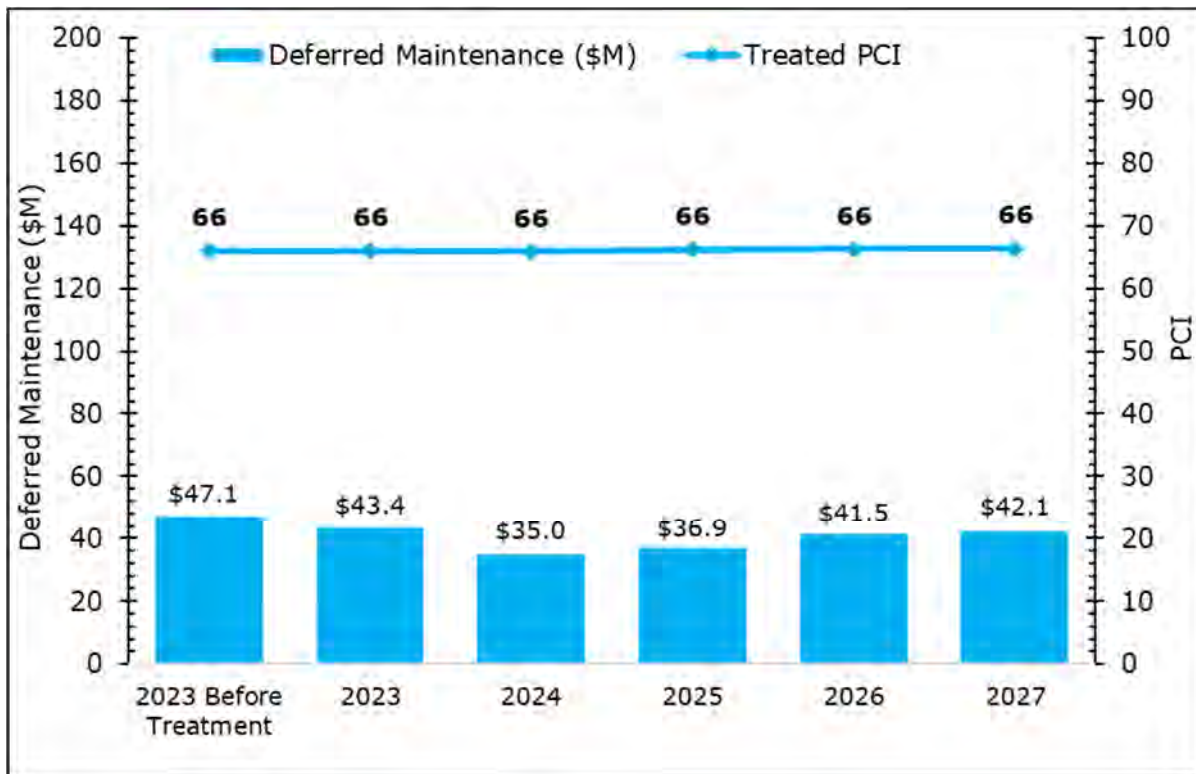

Figure 8. PCI vs Deferred Maintenance for Scenario 3

5.5 SCENARIO 4: IMPROVE PCI TO 72 (\$55.0M/5 YEARS)

This scenario aims to improve the network PCI to 72 by 2027. As shown in Table 7 and Figure 9, the financial commitment required for this goal is \$55 million over five years. This will result in 54.6 percent of the network being “Good” condition with 4.2 percent in “Failed” condition. The deferred maintenance will decrease to \$20.1 million by 2027.

Table 7. Summary Results for Scenario 4

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	11.0*	11.0*	11.0	11.0	11.0	55.0
Deferred Maintenance (\$M)	36.1	24.3	22.7	23.5	20.1	NA
Treated PCI	69	69	71	71	72	NA

*Includes scheduled CIP projects in 2023 and 2024

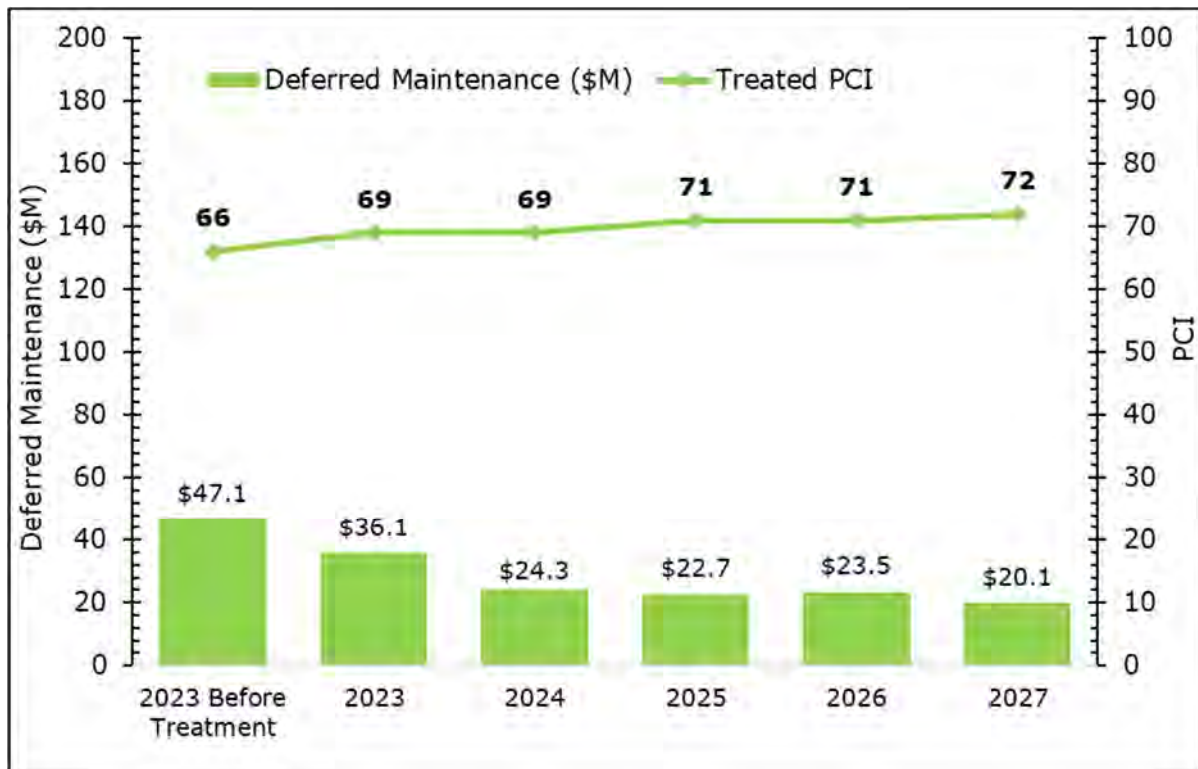

Figure 9. PCI vs Deferred Maintenance for Scenario 4

5.6 SCENARIO 5: BEST MANAGEMENT PRACTICE (\$70.0M/5 YEARS)

This scenario aims to achieve a network that can be maintained with best management practices over the next five years. As shown in Table 8 and Figure 10, the estimated financial commitment required to accomplish this goal is \$70.0 million over five years. This will improve the PCI to 76 and reduce the deferred maintenance to \$2.7 million. By 2027, 61.3 percent of the network will be in “Good” condition.

Table 8. Summary Results for Scenario 5

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	14.0*	14.0*	14.0	14.0	14.0	70.0
Deferred Maintenance (\$M)	33.1	18.1	13.2	10.5	3.4	NA
Treated PCI	70	71	73	75	76	NA

*Includes scheduled CIP projects in 2023 and 2024

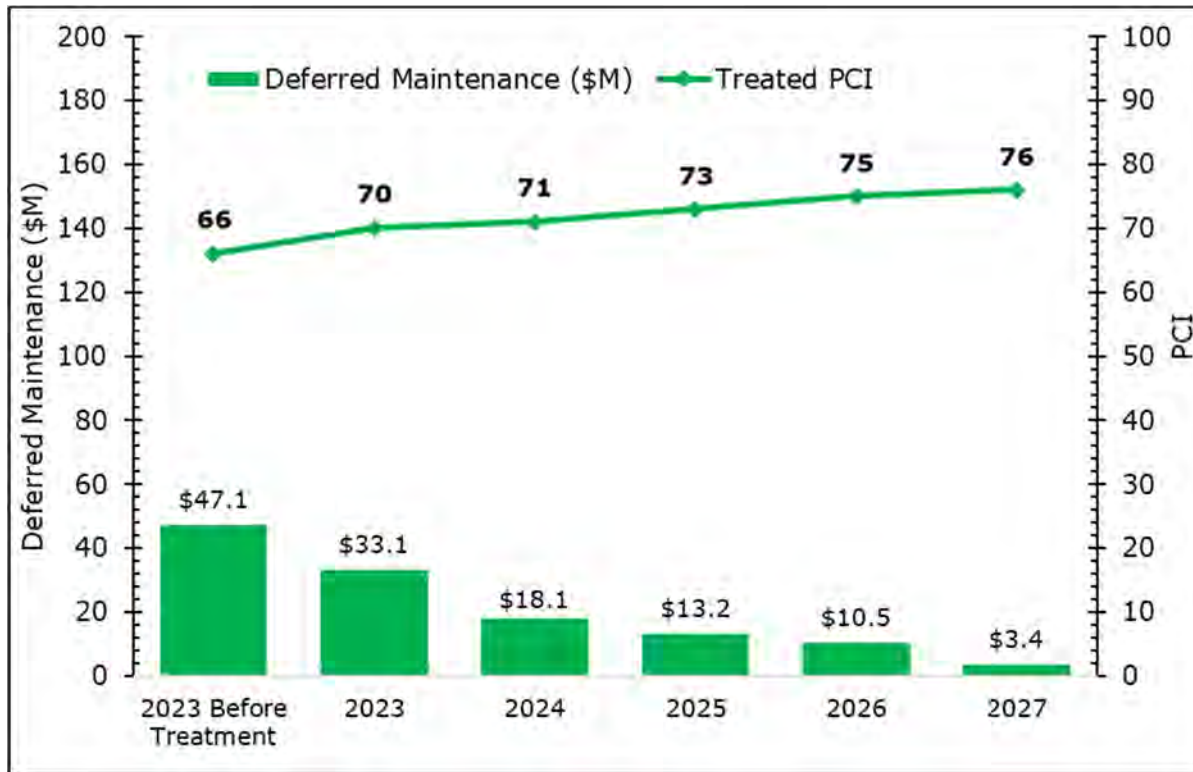

Figure 10. PCI vs Deferred Maintenance for Scenario 5

5.7 SCENARIO COMPARISONS

Figure 11 graphically compares the annual changes in PCI for each of the five scenarios. As previously noted, the average network PCI will decrease to 56 and 61 in Scenarios 1 and 2, be maintained at 66 in Scenario 3, and increase to 72 and 76 in Scenarios 4 and 5, respectively.

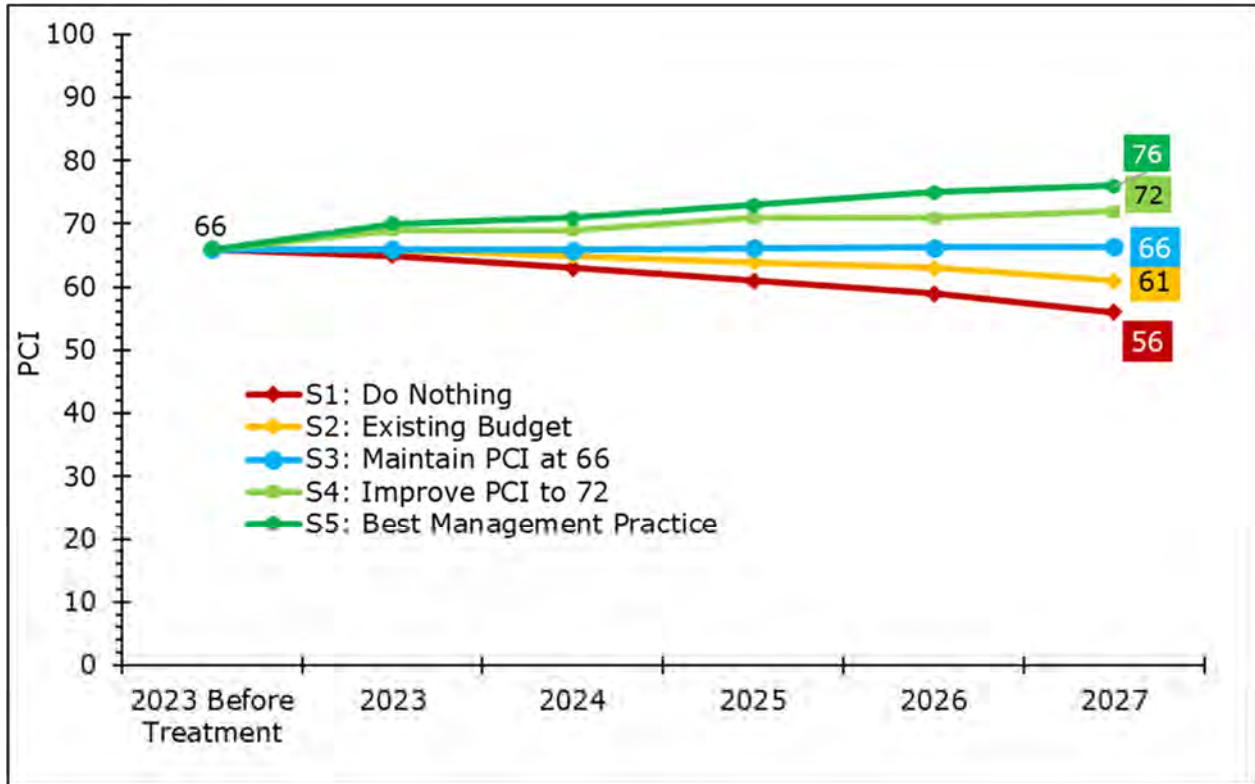

Figure 11. Comparison of Annual PCI by Scenario

Figure 12 illustrates the changes in deferred maintenance over time for each scenario. For Scenario 1, the deferred maintenance more than double. For Scenario 2, the deferred maintenance will increase by 30 percent. For Scenario 3, the deferred maintenance will decrease slightly to \$42.1 million. For Scenarios 4 and 5, the deferred maintenance will decrease to \$20.1 million and 3.4 million, respectively.

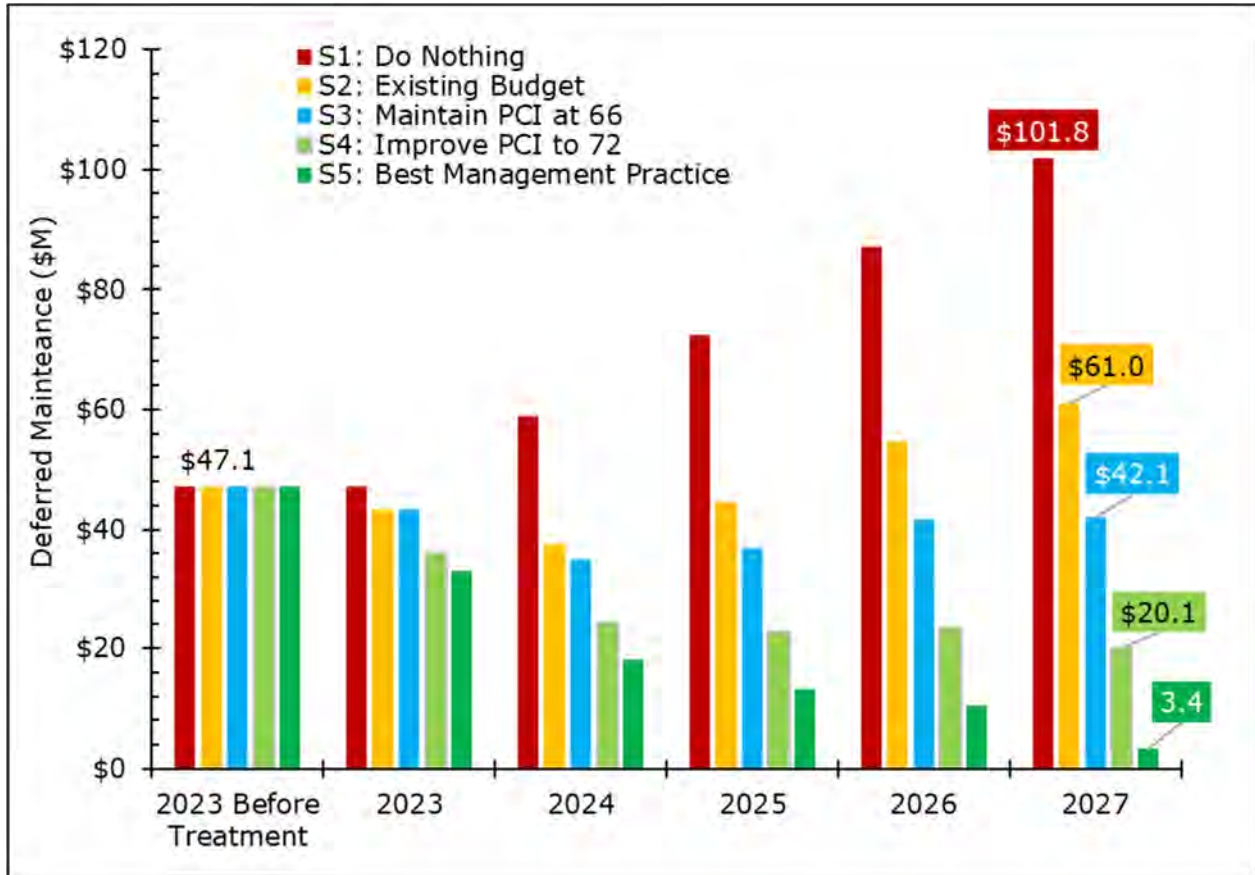

Figure 12. Comparison of Annual Deferred Maintenance by Scenario

Figure 13 illustrates the percent change in pavement condition for each scenario. As noted earlier, currently 38.2 percent of the network is in “Good” condition with just over one-tenth in “Poor” or “Failed” conditions. For Scenarios 1 and 2, the portion of the network in “Good” condition will decrease while for Scenarios 3 to 5 the portion of the network in “Good” condition will increase. Except for Scenario 5, where the portion of the network in “Failed” condition will be nearly eliminated, all other scenarios will have approximately 4 percent of the network in “Failed” condition.

Figure 13. Comparison of Pavement Condition Breakdown by Scenario

6 Conclusion and Recommendations

In summary, the City of Novato has a substantial investment of \$277 million in the pavement network. Overall, the City's streets are in "Fair" condition with a 2022 average network PCI of 66. Approximately 38.2 percent of the network is in "Good" condition and 12.1 percent is in "Poor" or "Failed" condition.

The analyses indicate that the City needs to spend approximately \$56.5 million on maintenance and rehabilitation over the next five years to essentially repair all pavement sections, thus bringing the network into a condition that can be maintained with on-going preventive maintenance. In the long run, this strategy will save the City money by preventing future pavement deterioration to levels requiring rehabilitation or reconstruction.

Based on the data collected and the scenarios analyzed and presented in this report, NCE offers the following recommendations.

1. **Funding** - The primary goal of PMPs should be to offer users a safe and functional pavement network without unduly increasing the maintenance burden in the future. With that in mind, the recommended scenario for the City is Scenario 4, which requires approximately \$55.0 million over the next five years. This budget allocation will increase the overall network PCI to 72, increase the portion of the network in "Good" condition, and decrease the deferred maintenance.

To address the gap between the City's existing funding and the recommended scenario, NCE recommends the City pursue additional funding sources. Potential sources include:

Federal Funding Sources

- Community Development Block Grants (CDBG)
- Congestion Mitigation and Air Quality Improvement Program (CMAQ)
- Federal Emergency Management Agency (FEMA)
- Highway Safety Improvement Program (HSIP)
- Bipartisan Infrastructure Investment and Jobs Act (IIJA)
- Regional Surface Transportation Program (RSTP)
- Surface Transportation Program (STP)
- Secure Rural Schools and Community Self-Determination Act

State Funding Sources

- Active Transportation Program (ATP), which now includes the Bicycle Transportation Account (BTA) and Safe Routes to Schools (SR2S)
- AB 2766 (vehicle surcharge)
- CalRecycle grants
- State Transportation Improvement Program (STIP)

- State Water Resource Control Board
- Transportation Development Act (TDA)
- Traffic Safety Fund
- Transportation Uniform Mitigation Fee (TUMF)
- Vehicle License Fees (VLF)

Local/Regional Funding Sources

- MTC PTAP (Pavement Management Technical Assistance Program)
 - Development impact fees
 - Enterprise Funds (solid waste and water) MTC PTAP (Pavement Management Technical Assistance Program)
 - Flood Control Districts
 - General funds
 - Local sales tax measures
 - OBAG (One Bay Area Grant Program)
 - Parcel/property taxes
 - Solid waste funds
 - Traffic impact fees
 - Traffic safety/circulation fees
 - Transportation mitigation fees
 - Transient Occupancy Taxes (TOT)
 - Underground impact fees
 - Utilities (e.g., stormwater, water, wastewater enterprise funds)
 - Various assessment districts (lighting, maintenance, flood control, community facilities)
 - Vehicle registration fees
 - Vehicle code fines
2. **Pavement Management Strategies** – Since a significant portion of the City’s streets are currently in “Good” condition (38.2 percent), it is important to maintain that condition to the extent possible. Preservation occurs when streets with PCIs higher than 70 receive treatments such as surface seals (slurry, microsurfacing, etc.). Seals are relatively inexpensive treatments that prevent moisture ingress and thus preserve the integrity of the underlying base material. NCE recommends that the City balance preventive maintenance with rehabilitation and reconstruction projects to preserve pavements in “Good” condition, improve pavements in “Poor” condition, and avoid increasing the deferred maintenance.
3. **Reinspection Strategies** – In order to make appropriate management decisions based on current data, NCE recommends that the City perform condition inspections on arterials and collectors every 2 years and on residential at least every 4 to 5 years. Additionally, since StreetSaver® and

other prediction models do not yet take into account the effect of specialized materials such as asphalt-binders with rubber or polymers, the actual performance of city pavements may not be fully captured in the analysis models. For this additional reason, NCE recommends regular pavement condition surveys to ensure model accuracy and relevance.

4. **M&R Decision Tree** – Considering the recent volatility in oil prices and curb ramp requirements, the future cost of construction is unknown and unpredictable. NCE therefore recommends that the City annually review and update the M&R treatment strategies and associated unit costs to reflect current construction techniques and changing costs. This will ensure that the results for the budget analyses are reliable and as accurate as possible.

Appendix A

SECTION DESCRIPTION INVENTORY

Section Description Inventory Report

This report lists a variety of section description information for each of the City's pavement sections. It lists the street and section identifiers, limits, functional class, surface type, number of lanes, length, width, area, Inspected PCI, and PCI date.

All of the City's pavement sections are included in the report. Two versions of the report are provided. The first is sorted alphabetically by Street Name and Section ID and the second report is sorted by descending PCI. The field descriptions in this report are listed below:

COLUMN	DESCRIPTION
Street ID	Street Identification - A code up to ten characters/digits to identify the street. Generally, the street name is truncated to six characters. The Street ID should be unique for each street.
Section ID	Section Identification - A code up to ten characters/digits to identify the section number. The Section ID must be unique for each section of one street.
Street Name	Street Name - The name of the street as indicated by street signs in the field.
Begin Location	Beginning limit of the section.
End Location	Ending limit of the section.
No. of Lanes	Number of travel lanes.
Functional Class (FC)	Functional Classification – MiA = Minor Arterial, MaC = Major Collector, MiC = Minor Collector, NCR = Non City Road, OPA = Other Principal Arterial, L = Local
Length (ft)	Length of the section in feet.
Width (ft)	Average width of the section in feet.
Area (sf)	Area of section in square feet.
Surface Type (ST)	Surface Type - AC = Asphalt Concrete, AC/AC = Asphalt Concrete Overlay, PCC = Portland Cement Concrete, GRAVEL = Gravel
PCI Date	The last inspection date or rehabilitation date.
PCI	Average PCI for the section. The value is based on the last inspection.

Section Description Inventory – Sorted by Street Name

Street ID	Section ID	Street Name	Begin Location	End Location	# of Lanes	FC	ST	Length (ft)	Width (ft)	Area (sf)	PCI Date	PCI

Appendix B

MAINTENANCE AND REHABILITATION DECISION TREE

Maintenance and Rehabilitation (M&R) Decision Tree

This report presents the current maintenance and rehabilitation decision tree that exists in the database. The decision tree forms the basis for all of the budgetary computations included in this report. ***Changes to the decision tree will make the results in the budget reports invalid.*** All pavement treatment unit costs relevant to the road types in the database were updated.

The decision tree lists the treatments and costs selected for preventive maintenance and rehabilitation activities. Each line represents a specific combination of functional classification and surface type.

The preventive maintenance portion of the report is identified as Condition Category I – Very Good. All preventive maintenance treatment listings are assigned only to sections in Condition Category I where the $PCI \geq 70$. Sections with PCI values less than 70 are assigned to treatments listed in Categories II through V.

In the preventive maintenance category ($PCI \geq 70$), a time sequence is used to identify the appropriate treatment and cost. Each preventive maintenance treatment description consists of three parts: 1) a CRACK treatment, 2) a SURFACE treatment, and 3) a RESTORATION treatment. These three parts allow the user to specify one of three different preventive maintenance treatments depending on the prior maintenance history of the section.

1. The CRACK treatment part can be used to specify the most frequent type of preventive maintenance activity planned (typically crack seals).
2. The SURFACE treatment part can be used to specify more extensive and less frequent preventive maintenance activities, such as chip seals or slurry seals. For example, a crack seal can be specified on a 3-year cycle with a slurry seal specified after 5 years.
3. The RESTORATION part can be used to specify a surface restoration treatment (such as an overlay) to be performed after a specified number of surface treatments. For example, after a certain number of successive slurry seals, an overlay can be specified instead of another slurry seal.

Rehabilitation treatments are assigned to sections in Condition Categories II through V (PCI less than 70). Each line is defined by a specific combination of functional classification, surface type, and condition category.

COLUMN	DESCRIPTION
Functional Class	Functional Classification identifying the branch
Surface	Surface Type identifying the branch number.
Condition Category	Condition Category (I through V).
Treatment Type	First Row (Crack Treatment) indicates localized treatment (e.g., crack sealing). Second Row (Surface Treatment) indicates surface treatment (e.g., slurry sealing). Third Row (Restoration Treatment) indicates surface restoration (e.g., overlay).
Treatment	Name of treatments from the "Treatment Descriptions" report.
Yrs. Between Crack Seals	First Row - number of years between successive treatment applications specified in the first row (i.e., CRACK treatment).
Yrs. Between Surface Seals	Second Row - number of years between successive treatment applications specified in the second row (i.e., SURFACE treatment).
Number of Sequential Seals	Number of times that the treatment application in the second row (i.e., SURFACE treatment) will be performed prior to performing the treatment application in the third row.

Note that the treatments assigned to each section should not be blindly followed in preparing a road maintenance program. Engineering judgment and project level analysis should be applied to ensure that the treatment is appropriate and cost effective for the section.

Appendix C

BUDGET NEED ANALYSIS RESULTS

Budget Needs Reports

The purpose of this section is to answer the question: *If the City had all the money in the world, what sections should be fixed and how much will it cost?* Based on the Maintenance & Rehabilitation (M&R) decision tree and the PCIs of the sections, the program will then select a maintenance or rehabilitation action and compute the total costs over a period of five years. The Budget Needs represents the "ideal world" funding levels, while the Budget Scenario reports in the next section represent the most "cost effective" prioritization possible for the actual funding levels.

A budget needs analysis has been performed. The summary results from the analysis are shown below. An interest rate of 5% and an inflation factor of 5% were used to project the costs for the next five years. This report shows the total five-year budget that would be required to meet the City's standards as exemplified in the M&R decision tree.

Budget Needs reports included in this appendix are listed below:

- Projected PCI/Cost Summary
- Preventive Maintenance Treatment/Cost Summary
- Rehabilitation Treatment/Cost Summary

Needs - Projected PCI/Cost Summary

This report summarizes and projects the network PCI over the five-year analysis period, both with and without treatments applied. It also reports the associated costs, which are based on the treatment unit costs presented in the M&R decision tree.

COLUMN	DESCRIPTION
Year	Year in the analysis period.
PCI Treated	Projected network average PCI with all needed treatments applied.
PCI Untreated	Projected network average PCI without any treatments applied.
PM Cost	Total preventive maintenance treatment cost.
Rehab Cost	Total rehabilitation treatment cost.
Cost	The budget required for each year in the analysis period to meet the City's standard as shown on the M&R decision tree.
Total Cost	Total budget required over a five-year period.

Needs - Projected PCI/Cost Summary

Interest: 5.00%

Inflation: 5.00%

Printed: 1/19/2023

Year	PCI Treated	PCI Untreated	PM Cost	Rehab Cost	Cost
2023	79	65	\$5,224,018	\$41,857,312	\$47,081,330
2024	77	63	\$478,336	\$3,358,093	\$3,836,429
2025	76	61	\$292,408	\$2,879,021	\$3,171,429
2026	74	59	\$181,559	\$1,146,452	\$1,328,011
2027	73	56	\$616,609	\$438,320	\$1,054,928
		% PM	PM Total Cost	Rehab Total Cost	Total Cost
		12.03%	\$6,792,930	\$49,679,198	\$56,472,128

Needs - Preventive Maintenance Treatment/Cost Summary

This report summarizes each preventive maintenance treatment type, quantity of pavement affected, and total costs over the analysis period. It also summarizes the total quantities and costs over the next five years.

COLUMN	DESCRIPTION
Treatment	Type of preventive maintenance treatments needed.
Year	Year in the analysis period (i.e., 2023, 2024, 2025, etc.).
Area Treated	Quantities in linear feet (Seal Cracks) or square yard (Slurry Seal).
Cost	Maintenance treatment cost.

Needs - Preventive Maintenance Treatment/Cost Summary

Interest: 5.00%

Inflation: 5.00%

Printed:
1/19/2023

Treatment	Year	Area Treated	Cost

Needs - Rehabilitation Treatment/Cost Summary

This report summarizes each rehabilitation treatment type, quantity of pavement affected, and total costs over the analysis period. It also summarizes the total quantities and costs over the next five years.

COLUMN	DESCRIPTION
Treatment	Type of rehabilitation treatments needed.
Year	Year in the analysis period (i.e., 2023, 2024, 2025, etc.).
Area Treated	Quantities in square yard.
Cost	Rehabilitation treatment cost.
